

SRTstrips

SRTstrips are high skid resistant black sealing thermoplastic strips, designed to seal a patch and help prevent the ingress of water leading to further road deterioration.

SRTstrips are easy to apply on a bituminous and concrete surface; always ensure the area of application is clean dry and free from dust, chemicals and any significant oil substances.

If application to concrete is required, the area should be prepared with PTSUR Primer.

ANTISKIDstrips Are extra high skid resistant thermoplastic strips, designed to prevent slips in floors, ramps and steps.

ANTISKIDstrips are easy to apply on a bituminous and concrete surface; always ensure the area of application is clean dry and free from dust, chemicals and any significant oil substances.

If application to concrete is required, the area should be prepared with PTSUR Primer.

3D SIGNS

We have designed 3D symbols, bollards to delimit lanes, striking zebra crossings, and posters that give the feeling of being vertical, to customize parking spaces and any other use

To apply on asphalt, cement and concrete
